Re: WEEB-CCR and WEEBLug-15.8 compatibility with the Würth Zebra line of PV mounting systems.

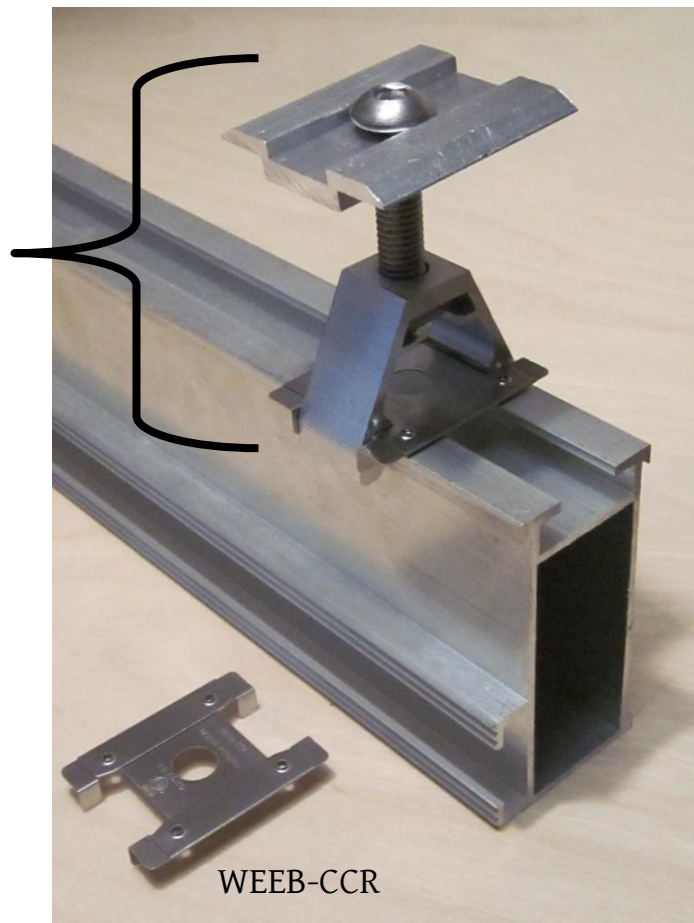

From: Burndy, LLC.

Burndy LLC confirms that the WEEB-CCR and WEEBLug-15.8 have been evaluated with the Würth Zebra line of mounting rails and were found to be compatible.

The mid-clamp AK HD assembly employing the WEEB-CCR is an acceptable bonding method for this racking system, provided anti-seize is applied onto the threads of all bolts and are tightened with a torque of 12 ft-lbs to ensure a proper connection.

Soon, a detailed installation manual will be completed to document proper use of the WEEB-CCR and WEEBLug-15.8 with the Würth line of mounting systems. Until that time, this letter will serve as a notice of system compatibility from Burndy.

Mid-clamp AK HD  
assembly employing  
WEEB-CCR on rail

Sincerely,

Harley Haney
